PROFESSIONAL SUMMARY

Results-oriented QA Engineer with around 3 years of experience in functional testing, regression testing, UAT, and defect management for enterprise-grade applications at Capgemini Technology Services. Currently serving notice period and available for immediate to short-notice joining.

Demonstrated expertise in requirement analysis, test case design, test execution, and defect lifecycle management using Jira and Zephyr. Experienced in Agile delivery and sprint-level test planning, with hands-on experience across manual and automation testing using Playwright.

Proven track record of achieving comprehensive test coverage and ensuring on-time, defect-free releases. Currently upskilling in AI/ML Engineering through an IIT Patna - Masai School program, expected 2026.

KEY SKILLS

Functional Testing: Manual, Regression, Smoke, Sanity, UAT, SIT, Volume Testing

Test Design: Test Case Design, Test Scenario Creation, Requirement Analysis

API Testing: REST API Testing - Postman

Defect Management: Defect Tracking, Bug Life Cycle, Root Cause Analysis

Tools & Methodologies: Jira, Zephyr, Legion (WFM), SDLC, STLC, Agile

AI / GenAI Testing: LLM Evaluation, Hallucination & Bias Testing, Prompt Engineering, GenAI Workflow Validation

Automation: Selenium with Java, Playwright (Python), pytest, POM, Cross-Browser Testing

WORK EXPERIENCE

Capgemini Technology Services | Analyst

Aug 2023 - Present

IKEA - People Planning Acceleration Program | QA / Functional Tester

Application: Legion Workforce Management (WFM) | Sep 2024 - Present

- Analyzed Business Requirement Specifications across core WFM modules - Scheduling, Timekeeping, Payroll, Absence, and Hours Budgeting - to design accurate test scenarios aligned with IKEA's functional and operational requirements.
- Owned end-to-end manual and automation testing using a Playwright (pytest) BDD - POM framework across WFM modules, building regression scenarios to improve test cycle efficiency.
- Designed, reviewed, and executed 500+ test cases in Zephyr across Smoke, ST, SIT, and UAT 2.0 cycles, achieving 100% functional coverage and reducing defect leakage to production.
- Gained working knowledge of EMD validations, including EMD New Hire and EMD-PA workflows supporting employee master data integrity; validated post-go-live Enhancement Requests (ERs) against acceptance criteria.
- Maintained end-to-end test traceability by linking test cases, defects, and requirements in Jira-Zephyr across UK and Ireland rollout environments; participated in war-room calls during critical release phases to ensure zero high-priority defects reached production.
- Performed volume testing for the Schedule module by manually creating employee schedules and maintaining bulk test data in Excel.

KPMG Project | QA Engineer (GenAI Focus)

Application: Enterprise GenAI Application (LLM-based) | Jan 2024 - Sep 2024

- Contributed to functional and regression testing of an enterprise GenAI application, validating LLM-generated outputs against defined acceptance criteria using LLM Evaluation Frameworks.
- Designed and executed test cases across functional, regression, and smoke cycles, incorporating Hallucination and Bias Testing strategies to assess model reliability.

- Performed chatbot testing, validating retrieval accuracy, context grounding, and generation quality across diverse query types; reported failures impacting response fidelity.
- Explored AI concepts, prompt frameworks, and prompt-based test generation techniques to improve validation efficiency and support AI-assisted testing workflows.

PERSONAL PROJECTS

Become Hero - AI-Powered Fitness Planner Web Application

Live: <https://celebrated-wisp-6f676c.netlify.app> | Tech Stack: HTML, CSS, JavaScript, Google Gemini API, Netlify

- Independently designed and deployed a responsive AI-powered fitness web application using the Google Gemini API, generating personalized 5-day workout plans tailored for Beginner, Intermediate, and Advanced users.
- Integrated a GenAI-powered coaching chatbot with advanced prompt engineering techniques to deliver real-time fitness and nutritional guidance.
- Conducted end-to-end functional testing, UI validation, and edge case analysis, applying QA expertise to ensure application reliability, consistent performance, and zero critical defects at launch.

CERTIFICATIONS

- AI/ML Engineering Program - IIT Patna, in collaboration with Masai School (In Progress, Expected 2026)
- Prompt Engineering - Coursera (2024)
- V&V Automation Testing (Java & Selenium) - Capgemini L&D (2023)

EDUCATION

B.Sc, Software Systems — Sri Krishna College of Arts & Science — 2019 - 2022
